

Enabling ActiveX Controls in Internet Explorer

Step 1 - Open Internet Options

Older Browsers: Under Tools -> Internet Options

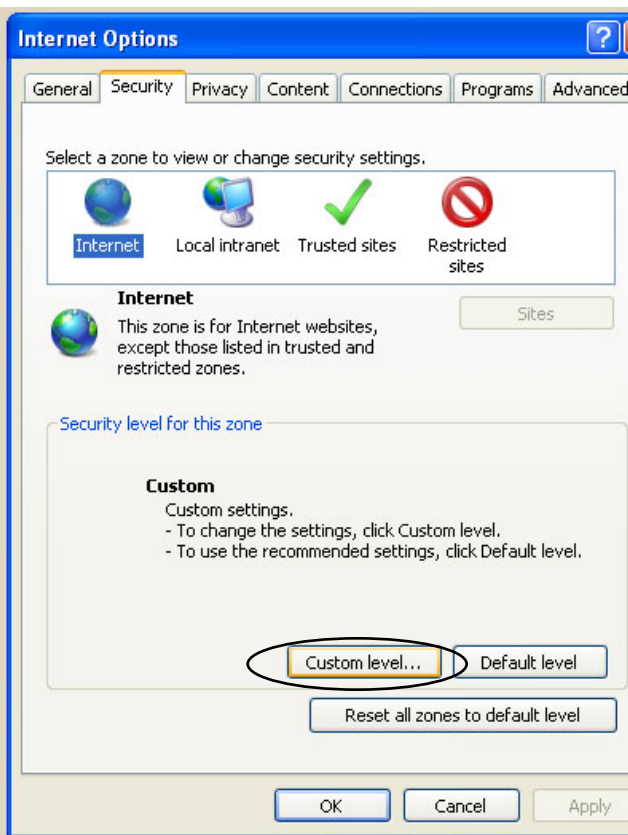

Newer Browsers: Tools -> Internet Options

OR

Step 2- Click on "Custom Level..."

Step 3- By default, ActiveX Controls often are disabled. Change to **"Prompt"**. Never change to "Enable"! ActiveX Controls can be very harmful if malicious. We've tested Client Controls on products we sell, but if you are surfing the web and get the popup to "Download" or "Install" ActiveX control, only do so if you are very confident!
